

# Third Party Cookies

You have seen the message “You have set your browser to not allow third party cookies” on a login page, it does not indicate that there is an issue with the web page’s login and instead means that your browsing settings need to be updated to **allow third party cookies**. CONA uses Membee as its membership system.

In order to log in and maintain your login during your browsing session, third-party cookies must be enabled in your browser

Third-party cookies allow a member to login and stay logged in to a third-party login system (in this case, Membee’s login is the third party) for the duration of their browsing session. Any website that offers login uses third-party cookies to keep the visitor logged in, as third-party cookies is currently the only available methodology to keep someone logged in. Without third-party cookies being enabled, login functionality would not work.

If you're having trouble logging into your membership, please read below for instructions on enabling cookies.
